Statement of Purpose

Dear Madam or Sir,

I am Hongwei Li who currently study at the University of Queensland and will finish my undergraduate program in June 2019. I major in Computer Science and I would like to continue study Computer Science in next program. Therefore, I would like to apply for Master of Computer Science in Oxford. This is because Master of Computer Science in University of Oxford is an excellent choice for me and I am also a suitable and potential candidate for this program.

First of all, Oxford is a world-famous Institution that has a large number of excellent researchers and experienced teachers which is an important resource for students in this area since students can get the most advance idea like better algorithms, data structure or hardware innovation on this area and apply this advanced area into practice. This endows students an excellent atmosphere to explore Computer Science. Therefore, I believe that Oxford is an excellent Institution that can let me explore Computer Science with the best resources and most creative friends.

I have enrolled almost all fields of courses in Computer Science including Computer System (Compiling, Data Structure …), Database System, Web Design, Software Engineering (programming with Python, Java, C, C++, PHP …) and product development (HCI, Proposal and Bild …). Besides, I all learn a lot of mathematics which can lay a good foundation for my logic thinking ability and mathematic. Consequently, I am confident that my academic background can support me in this program if I am lucky enough to be admitted. Besides, I am a creative student who is always applying my new ideas into practice. Creativity is quite vital for Computer Science student but daring to apply new idea into practice is more valuable since practice means more problems from compatibility to efficiency. I am the student who dare to apply new idea. Hence, I am confident that I am a suitable and potential candidate for Oxford in Computer Science master since my creativity, hands-on ability and academic background.

Besides, Oxford is an Institution that concentrates on the academic field compared to many other universities. Oxford is committed to cultivate student and bring up excellent academic workers for world. For this reason, student here can focus on their academic work and try their best to make progress in their study area. Besides, student can learn more in Oxford than other universities because Oxford has a more reasonable arrangement of courses and Exam System. For these reasons, Oxford has been my dreamed Institution since high school. I dare not to apply for undergraduate program of Oxford two years ago because I lacked confidence. After studying in UQ for two years, I believe that my ability and quality can make me face the challenges in Oxford. Consequently, I apply for the program of Computer Science Master in Oxford.

Moreover, it is known that Oxford students need to handle heavy workload and keep a good performance among their peers. I choosing to finish my three-year bachelor program in 2 years is to train my ability of time management and improve my efficiency of study. I can keep a

good balance between my study and entertainment although I have heavier workload than others in the University of Queensland now. Therefore, I believe that I am able to handle the heavy workload in Oxford and keep high efficiency in my next program. Hence, I am confident that I am a suitable candidate for Computer Science Master program in Oxford because I can face the challenges and solve possible problems that will appear in this program.

At last, I am personally interested in Artificial Intelligent since I love simplifying complex thing. AI is the best method that can help people simplify complex things. From my point of view, AI is a kind of algorithm that collect the data of manipulator and find the most suitable route for users. I am interested in math and computer while AI is the most powerful combination of Computer Science and Math. Therefore, I apply for the Computer Science Graduate Program of Oxford and I am also confident that I can do well in this field.

In conclusion, Oxford is an excellent choice for me from academic scale to my personal scale and I am a competitive and qualified candidate for Oxford. It is my honour to be an Oxford student if I am lucky enough and I believe I will also make my own contribution to Oxford if I have the chance of study in University of Oxford as a Computer Science student.

Kind Regard

Hongwei Li
